Solar Observation Boxes - Nina Zingale, Kirkland, WA and David Halsell, Seattle, WA

Medium - Wood, glass, and digital printout	$6,000.00

How odd is it to see three shipping crates sitting on a grassy hill? This artistic collaboration between two artists, invites curious people to investigate their sculpture of "found" objects. The artists worked together researching, planning and fabricating a sculpture that gives a whole art experience to the viewer. While researching sundials, they discovered sundials were tools used by early scholars and scientists to determine the time of day and to learn more about the solar system.

Early sundials often include a quote or motto. For one of shipping crates, the artists chose a quote by T.S. Elliot because it suits what is found on the inside. Do you see the different eyeholes placed around the crates? Peer inside to discover the previously unseen interior and experience the movement of the sun and other celestial events. What do you think about the quote now? Can you see different things in the other two crates?

Do you see any other art pieces that use wood on the inside of a piece to hold it together, instead of on the outside?
