

Hydrant Use Permit Definitions and Fees

Development Engineering

EFFECTIVE DATE: 2/1/2023

Type “A” permits allow a one-inch or smaller connection to the hydrant for short-term construction, demolition or landscape activities. Meters are not issued with type "A" permits. Type "A" permits are billed a monthly administrative fee and a flat daily fee, based on rates outlined in the fee table below. Applicants must make use of their own backflow prevention device and submit approved testing results of their device.

Type “B” permits allow a valve connection to the hydrant to fill water trucks or tanks. This water may be used for construction, street or parking lot cleaning, landscape spraying or other similar uses. Type "B" permits are billed a monthly administrative fee and a flat daily fee, based on the rates outlined in the fee table below. **NOTE:** All trucks and tanks must be inspected and have an air gap at the filling point or must meet backflow prevention requirements before permits are valid.

Type “C” permits allow a metered connection to the hydrant. Type "C" permits are for use with hose or piping larger than one inch and/or any other uses not classified as type "A" or "B". After the paperwork is completed for the type "C" permit, the hydrant meter must be picked up from the City's Maintenance Operations Center. Applicants must make use of their own backflow prevention device and submit approved testing results of their device. Type "C" permits are billed a monthly administrative fee, flat daily fee and a commodity charge based on water usage reported. The permit holder is required to report a monthly meter reading to the Development Services Center for invoicing purposes. **NOTE:** Type "C" permits are contingent on meter availability.
